	Columnar Headings	5
	Functional Codes	6
	Unit Type Code changes	7
II.	TORGNA IN STANDARD REQUIREMENT CODE (SRC) SEQUENCE	
III.	TORGNA IN UNIT TYPE CODE (UTC) SEQUENCE	

Section I. GENERAL

1. Purpose. This pamphlet describes the Unit Type Code (UTC) and Unit Level Codes (ULC) designed to identify Army units either planned or current and covered by an Army authorization document.

2. Applicability. This pamphlet applies to the Active Army, the US Army Reserve, and to the Army National Guard.

3. Explanation of Terms. *a. Unit Type Code (UTC).* The UTC is a five-character alphabetic/numeric code which is associated with and allows each type unit/organization to be categorized into a kind or class having common distinguishing characteristics. The first character of the UTC is structured as the Functional Code. The remaining characters are random. The standard UTCs are associated with a Standard Requirements Code. The nonstandard organizations which are Table of Distribution and Allowance Units, Composite Cellular Units, Derivative units for Logistical and nonpermanent accounts are assigned UTCs based on the mission/function of the organization. The UTC for a TOE organization will change with a reorganization to a different SRC. The UTC for a TDA organization will change if there is a change in mission/function as the result of a reorganization.

b. Unit Level Code (ULC). ULC is an alphabetic code which is associated with and allows each unit/organization to be categorized according to a stratum, echelon, or point at which control or authority is concentrated. Authorized ULCs are prescribed in JCS Pub 7 and appendix A, table 2, volume II, part 2, chapter, JCS Pub

6. The ULC for a unit describes the level of the SRC under which the unit is organized and is not necessarily the same as the authorized unit/organization level.

c. Standard Requirements Code (SRC). A basic set of codes, integral to each current Table of Organization and Equipment (TOE) for the purpose of expressing each and every possible combination or variation thereof, which when associated with organizational data is the basis for personnel and supply computations.

4. Sequence. Section II is listed in Standard Requirement Code sequence (SRC). Section III is listed in Unit Type Code sequence (UTC).

5. Columnar Headings—Section II and Section III.

- Column 1 —Standard Requirements Code
 - TOE Base Number
 - TOE Sub Number
 - TOE Series
 - TOE Year
 - TOE Variation
 - TOE Strength Level
- Column 2 —Deployment Indicator TOE Paragraph
- Column 3 —TOE Status
 - F = Final Published TOE
 - D = Draft TOE
- Column 4 —Unit Type Code (UTC)
- Column 5 —TOE Strength
 - a. level 1 = Full Strength
 - b. level B = Type B Strength

*This pamphlet supersedes DA Pamphlet 525-11, 1 November 1976

- Column 6 —TOE Branch (BR)
- Column 7 —Unit Level Code (ULC)
- Column 8 —TOE Title
- Column 9 —TOE Classification (applies to Section II only)

6. Functional Codes. The Functional Codes are based on a categorization of type organizations by functional areas. By providing significance to the left-most character of the UTC, the functional areas facilitate UTC assignment, management, and use. Functional Codes and their individual Service definitions are listed in JCS Pub 6, Part 14 are as follows:

<i>Functional codes</i>	<i>Definitions</i>
A	Multifunction Task Organization
B	Not Used
C	DOD Agencies, National Command Authorities, Service Headquarters, Major Command Headquarters, and Multifunction Command Headquarters
D	Civil Government Entities
E	Not Used
F	Biomedical Science
